U.S. Citizen

PROFILE

I work across web applications, Active Directory, reverse engineering, AI/ML security, and the systems connecting them. My published work documents complete attack paths, including failed approaches, source review, custom tooling, and the evidence that determined what worked. I came to security with 20+ years of independent technology work and professional IT leadership across web platforms, endpoint security, identity, infrastructure, and technical support.

CORE CAPABILITIES

Offensive security: Web application testing and exploitation, Active Directory attack paths, privilege escalation, reverse engineering, mobile application analysis, OSINT, post-exploitation, and attack-chain documentation.

Selected tools and development: Python, Go, Bash, Java, Burp Suite, BloodHound, Impacket, Ghidra, ILSpy, Wireshark, Git, and GitHub Actions.

Detection and analysis: Sysmon, Windows event logs, Splunk, Wireshark, network traffic analysis, malware triage, DFIR, cloud audit logs, and identity-focused investigation.

Platforms and frameworks: Windows, Linux, Active Directory, Docker, Proxmox, AWS, Azure, Microsoft 365, MITRE ATT&CK, MITRE ATLAS, OWASP Top 10, and OWASP LLM Top 10.

SELECTED SECURITY PROJECTS

Cyber Apocalypse 2026 Portfolio | *Web Exploitation | Reverse Engineering | AI/ML Security*

- Recovered a custom four-byte VM from a stripped ARM64 binary, then wrote a Python disassembler, emulator, and inverse solver that reproduced the accepted input through forward execution.
- Chained application and service flaws across Signetry and Archonyx, including stored client-side execution, an authenticated review bot, unsafe ZIP extraction, Java deserialization, and a finalize-withdraw race.
- Cloned a black-box classifier, transferred a constrained adversarial example, recovered a hidden backdoor specification, and forged a behavior-preserving composite model.

Active Directory Attack-Chain Portfolio | *Kerberos | AD CS | BloodHound*

- Executed and documented Kerberoasting, BloodHound path analysis, targetedKerberoast, remote execution, and ESC1 certificate abuse across Operation Endgame and Ledger.

organAlzedcrime | *Go | AI/ML Security | MITRE ATLAS*

- Built a Go CLI for authorized AI/ML security work that queries MITRE ATLAS and cross-references OWASP LLM Top 10, STRIDE, and NIST AI RMF.
- Added validated payloads with provenance, HTTP and Ollama execution modes, technique batteries, tool mappings, and prebuilt binaries for Linux, macOS, and Windows.

aismon | *Python | Sysmon | Detection Engineering*

- Built and hardened a command-line detector for AI-related activity in Windows Sysmon Event ID 1 data, using 35 YAML rules across seven behavior categories.
- Added secure XML parsing, API-key redaction, false-positive tests, schema validation, and automated testing across multiple Python versions.

PROFESSIONAL EXPERIENCE

Head of IT / System Administration

2022–2024

Invasion Group & Righteous Babe Records

- Managed infrastructure across multi-site operations, including web platforms, endpoint protection, content delivery, payroll systems, and third-party services.
- Hardened identity and access controls, supported users and devices, coordinated vendors, and handled failures affecting daily operations.

IT Support & Technical Consulting

2005–Present

Independent, Selected Engagements

- Support selected clients with device hardening, hosting, DNS and firewall configuration, identity management, backups, Google Workspace, and Microsoft 365.
- Diagnose hardware, software, account, and network failures across mixed personal and small-business environments.

Online Booking Department Developer and Administrator

Feb 2009–Jan 2011

Starving Students

- Hired to develop and administer the company's first online chat and booking platform, expanding a phone-only booking process into a hybrid digital operation.
- Took on management of the five-person online leads department as the role grew, including workflow standards, lead routing, and daily operations.

LEADERSHIP & COMMUNITY

Co-Founder

2021–Present

Crumpled Thoughts, 501(c)(3)

- Provide operational oversight for literacy, technology education, cybersecurity, and digital-safety programs through a nonprofit established in New Mexico and Virginia.
- Oversee technology and infrastructure decisions supporting the organization's programs and administrative work.

Vice President, Cybersecurity Club

2026–Present

California Institute of Applied Technology

- Support beginner CTF participants and help organize hands-on practice.
- Participate in weekly Red Siege Wednesday Offensive sessions.

CERTIFICATIONS & CREDENTIALS

CompTIA: Security+ ce, Network+ ce, and A+ ce

Additional: ISC2 Certified in Cybersecurity, CC; AWS Academy Graduate, Cloud Foundations; EC-Council ADG Verified in Defend.

EDUCATION

A.A.S., Computer Information Systems, Cybersecurity

California Institute of Applied Technology

Completed Jul 2026

GPA: 4.0

Applied Bachelor's Degree in Computer Information Systems, Cybersecurity Concentration

California Institute of Applied Technology

Begins Sep 2026 | Expected Mar 2028

SELECTED TRAINING

Current: Offense for Defense and Kerberos Workshop, Red Siege

Antisiphon Training: How to Build Pressure-Proof Pretexts, taught by Alethe Denis; Threat Hunting Summit 2026 with Black Hills Information Security.

Applied security: AI Cyber Defense Ops, Just Hacking Training through WiCyS; SANS Baker221b Workshop.

TryHackMe: Web Application Red Teaming and AI Security learning paths

ADDITIONAL

TryHackMe: Top 1% globally | Legend | jenn_notabot

Portfolio: Technical writeups, custom tools, source review, and complete attack paths published at jennshaggy.github.io.
