

JENN SHAGRIN

Cybersecurity Student | SOC Investigations | Malware Analysis
Albuquerque, NM | 323-710-2072 | jennshagrin@proton.me
LinkedIn: <https://linkedin.com/in/jenn-shagrin>
U.S. Citizen | Eligible for TS/SCI Clearance

SUMMARY

Cybersecurity student with CompTIA Security+, Network+, and A+ certifications and hands on experience in SOC investigations, malware analysis, incident response, and systems defense. Experienced analyzing phishing activity, suspicious PowerShell execution, and network telemetry using tools such as Wireshark, Splunk, Elastic Stack (ELK), Volatility, Burp Suite, ffuf, dnsrecon, Sublist3r, and Linux. Strong technical documentation and investigation skills with a 4.0 GPA and a growing focus on national security and defensive cyber operations.

CERTIFICATIONS:

CompTIA Security+ | Active through 2028
CompTIA Network+ | Active through 2028
CompTIA A+ | Active through 2029

CompTIA Stackable Certifications
C IOS (CompTIA IT Operations Specialist)
C SIS (CompTIA Secure Infrastructure Specialist)
C APP (CompTIA Advanced Security Practitioner Pathway)

TryHackMe SOC Level 1 Certificate

CORE TECHNICAL SKILLS

Security Operations

SOC investigation, incident response, alert triage, IOC analysis, malware analysis, MITRE ATT&CK mapping

Endpoint, Identity, and Network Security

Endpoint hardening, RBAC, AAA, least privilege, vulnerability assessment, network segmentation

Cloud and Automation

Azure fundamentals, security automation concepts, AI assisted security workflows

Systems and Tools

Windows Server, Windows 11, Ubuntu, Debian Linux, Cisco IOS, Splunk, Wireshark, nmap, Nessus, CyberChef, Autopsy, Packet Tracer

Frameworks and Protocols

NIST CSF, MITRE ATT&CK, DNS, DHCP, SSH, VPN, AAA, RBAC

CYBERSECURITY PROJECTS & HANDS-ON EXPERIENCE

Security Portfolio and Technical Documentation

Independent Project | 2024–Present

- Designed and maintain a published technical portfolio documenting cybersecurity investigations, system hardening, network architecture, and technical projects.
- Created structured Markdown based documentation to improve clarity, traceability, and incident recordkeeping.
- Built a single technical record that demonstrates hands on work across systems, networking, endpoint defense, and cloud foundations.

Security Operations and Incident Response | LetsDefend, Hack the Box, CIAT Labs

- Investigated phishing, malware execution, suspicious PowerShell activity, and lateral movement across simulated SOC environments.
- Correlated host and network telemetry to identify attacker behavior, validate indicators, and distinguish true positives from noise.
- Documented IOCs, timelines, and remediation steps using structured Markdown workflows.

Threat Intelligence & Vulnerability Analysis

- Analyze CVEs, mapped vulnerabilities to exploits, and performed service enumeration using nmap.
- Investigated phishing campaigns, reviewed attacker tradecraft, and researched APT techniques using OSINT.

Detection Engineering and Security Automation

- Built and tuned detection logic for phishing, suspicious PowerShell execution, malware payloads, and data exfiltration.
- Applied automation concepts to improve triage speed and reduce repetitive analyst workload.

Endpoint Security & Hardening

- Hardened Windows 11 endpoints using ransomware protections, application control, and identity focused security settings.
- Configured event monitoring to surface indicators related to privilege escalation, persistence, and lateral movement.

Identity & Access Management

- Applied RBAC and least-privilege principles across lab and organizational environments.
- Configured and analyzed AAA and TACACS+ authentication scenarios.

Cloud and AI Foundations | Azure

- Completed Microsoft Learn coursework covering Azure AI services, governance, and secure deployment concepts.
- Explored Microsoft Foundry and AI enabled cloud tooling with a focus on secure use cases.

Offensive Security Training | In Progress

- Completed hands on training in Kerberoasting, Silver Ticket, and Golden Ticket attack and defense concepts through Red Siege coursework.

PROFESSIONAL EXPERIENCE

Freelance IT Support & Technical Consulting | 2005 – Present

Delivered IT and security support including device troubleshooting, secure configurations, and access controls.

Implemented backups, identity management, and hardened environments for small organizations.

Head of IT / System Administration – Invasion Group & Righteous Babe Records | 2022 – 2024

Managed secure IT infrastructure, endpoint protection, and cloud access workflows.

Applied hardening practices and access controls to reduce operational and cybersecurity risk.

Owner / Systems & Operations Manager – Sidewalk Sages | 2016 – 2021

Managed POS systems, scheduling platforms, and internal technology operations.

Improved system reliability and operational security.

Co-Founder – Crumpled Thoughts (501(c)(3)) | 2021 – Present

Designed and managed secure networking and cloud platforms for nonprofit operations.

Developed technology and cybersecurity literacy initiatives aligned with NIST and SOC-style frameworks.

ADDITIONAL TRAINING

Azure AI Engineer Path | CompTIA CyberDefense Pro | Red Siege Kerberos Workshop

EDUCATION

California Institute of Applied Technology

Certificate in Computer Information Systems | 4.0 GPA

Associate of Applied Science in CIS | Expected 2026
